

# Release Notes

**Product** BioGyan

---

**VERSION:** 1.0

**PART # / CSUM:**

**Please Note:** Manual is not available for this version.

**FEATURES:** Following features are available in this release

- Facilitates combinatorial search using databases like PubMed, NCBI Gene, UniProt, PDB, etc.
- Read abstracts offline
- Ranks abstracts based on relevance to the search terms
- Highlights the relevant text
- Reprioritize your abstracts
- Displays biological pathways and 3D structures for queried biomolecules
- Export citations

**KNOWN ISSUE:** Following are the known issues in this release

- Java Heap Exception may occur when there are too many results. The actual number depends on the internal memory of your computer. This exception may lead to crashing/freezing of the application.
- Premature EOF Exception may occur when the internet speed or server response is very slow.
- If a gene has been replaced/modified in NCBI database, the application will not be able to fetch the annotation.
